

## CA106 – Revised homework #1

### Chapter 2 page 2.77 Case #2

The project should be typed with your name and the words “CA106 Homework #1” along the top

Step #2 and #3 should be modified as described below:

- Have at least 15 icons on your screen before you start
- Select to auto-arrange the icons (this will force them along the left edge)
- Select five combinations of screen resolutions and colors
  - The first combination should be the lowest resolution and fewest colors
  - The last combination should be the highest resolution and most colors
  - Select three more in the middle to see their effect
- Record your results in a table listing the resolution, colors, max number of icons in a column, and picture quality for each combination

Sample table: (your results should **NOT** match these – I made them up!)

Resolution	# Colors	# Icons	Picture Quality
347x283	9	3	crappy
...	...	...	...
...	...	...	...
...	...	...	...
2450x1345	74 million	50	Stunning!
