# Creating Online Tutorials with Camtasia

It's as easy as 1, 2, 3...

1.

Capture the initial on screen demonstration → Start Camtasia Recorder → Start the software to be shown → Execute the demo (with or without commentary)

→ Pause recording if needed (F9) → Finish recording (save ".camrec" file)

2.

Edit the demonstration → Add images (still and moving) to "Clip Bin" → Drag images to timeline → Edit images

Add transitions between image segments ↔ Zoom in to highlight small portions of screen ↔ Add "callouts" to emphasize screen elements ↔ Delete portions of video to enhance clarity

→ Save project (".camproj" file)

3.

Publish the final demonstration → 1 Movie or Multiple?

— Many → Create Web or CD Menu → Distribute to Users

— One → Select target destination (recommend my settings) → Identify Content and Quality → Name it and Create it and Save it → Distribute to Users
